**TECH SUPPORT
(812) 618-9168**

1) Locate the small ECM connector and MAP sensor on the left side of the engine. The ECM is on the side of the engine in the open. The MAP sensor is located on the intake manifold near the bottom of the engine.

2) Unplug the ECM connector by actuating the swing lock to release the connector from the ECM. Plug the module Female ECM Connector into the factory ECM.

Note: Make sure the connector seats firmly and evenly into the ECM before actuating the swing lock to secure the connector in place.

3) Plug the factory ECM connector into the module Male ECM connector.

Note: Make sure two connectors fit together firmly and evenly before using swing lock to secure them together.

4) Unplug the factory MAP sensor connector by pressing the release tab and pulling away from the sensor.

Note: Due to paint you may need to gently assist release tab with a flathead screwdriver.

5) Plug the Female Module MAP Sensor Connector into the factory MAP sensor in the same orientation you unplugged it. Plug the Male Module MAP Sensor Connector into the factory Female MAP Sensor Connector.

6) Route the power and ground leads to the battery following the conduit into the battery box. **Note: If contacts are dirty, clean before installing to ensure clean contact.**

7) Plug the harness into the module. Mount the module with supplied zip ties away from any excessive heat or moving parts. **Note: Zip tie the module to the factory wire harness. Mounting the module with the switch connector down will help prevent moisture from collecting into the module connector.**
